7.Integrating a Zoho Creator Application with Another Zoho Service Using Connections and APIs

Aim

To integrate the **Gym Membership Application** built in Zoho Creator with **Zoho CRM** (or Zoho Mail/Cliq) using Zoho Creator **Connections** and **Deluge APIs** to automate data synchronization upon new member registration.

Objective

- Understand the concept of **Zoho Creator Connections** for secure authentication using OAuth 2.0.
- Learn how to invoke external/internal service APIs using Deluge `invokeurl` task.
- Automate business logic so that whenever a new member registers in the Gym Membership form, a corresponding Contact/Lead is automatically created in Zoho CRM.

Tools Required

- **Zoho Creator Account** (Developer or Enterprise edition).
- **Zoho CRM Account** (integrated within the same Zoho Organization).
- **Gym Membership Application** containing at least one form: `Member_Registration` with fields:
  - `First_Name` (Single Line)
  - `Last_Name` (Single Line)
  - `Email` (Email)
  - `Phone_Number` (Phone)
  - `Membership_Type` (Dropdown: Basic, Premium, VIP)

Procedure

Step 1: Setting up the Connection in Zoho Creator

To securely communicate with Zoho CRM without hardcoding credentials or tokens, a Connection must be established.

1. Open your **Zoho Creator** workspace and navigate to your **Gym Membership Application**.

2. Go to **Settings** > **Connections** > Click **Create Connection**.
3. Select **Zoho Services** as the service provider.
4. Choose the required scopes (e.g., `ZohoCRM.modules.ALL` or `ZohoCRM.settings.ALL`).
5. Name the connection **`zoho_crm_connection`** and click **Create and Authorize**.
6. Accept the permission prompt to authenticate the connection.

Step 2: Identifying the Target API Endpoint

For Zoho CRM, the API endpoint to insert a record (Contact) is:

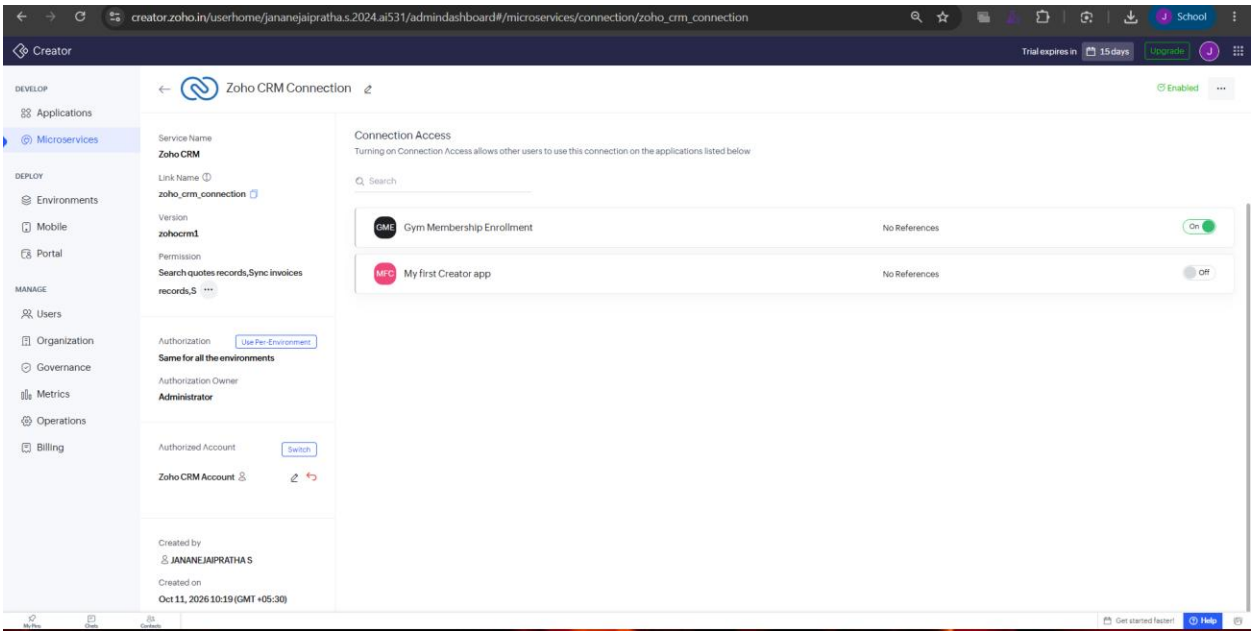

- **Method:** `POST`
- **URL:** https://www.zohoapis.com/crm/v2/Contacts

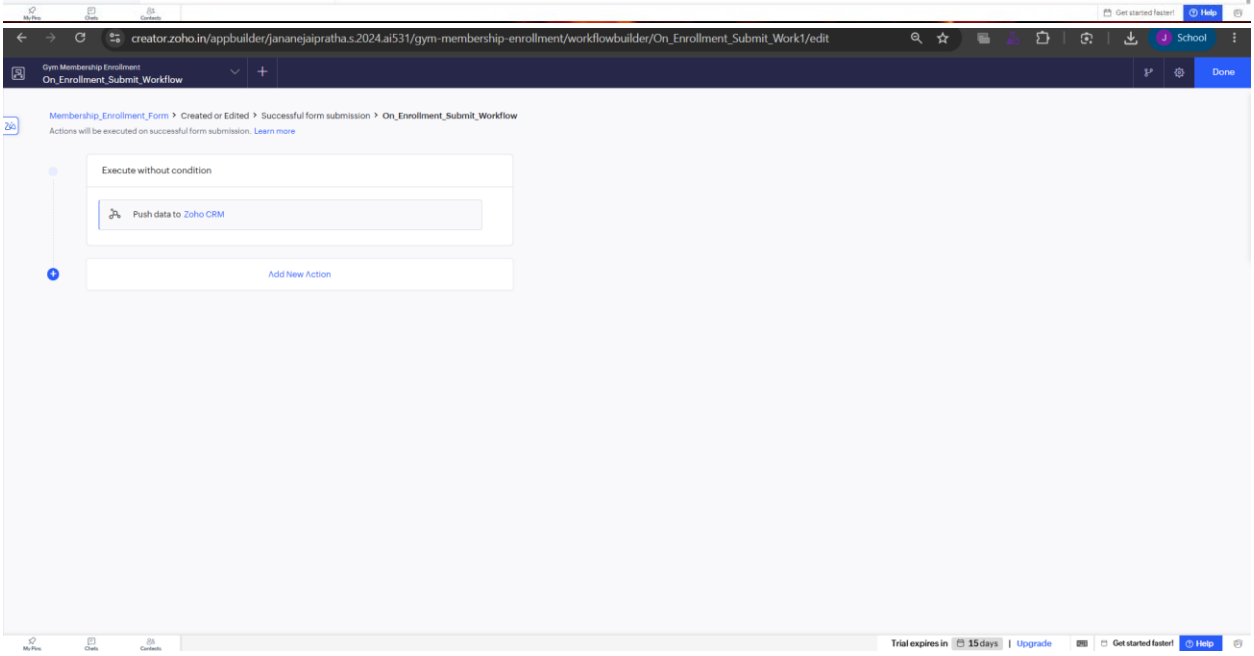

Step 3: Writing the Deluge Script

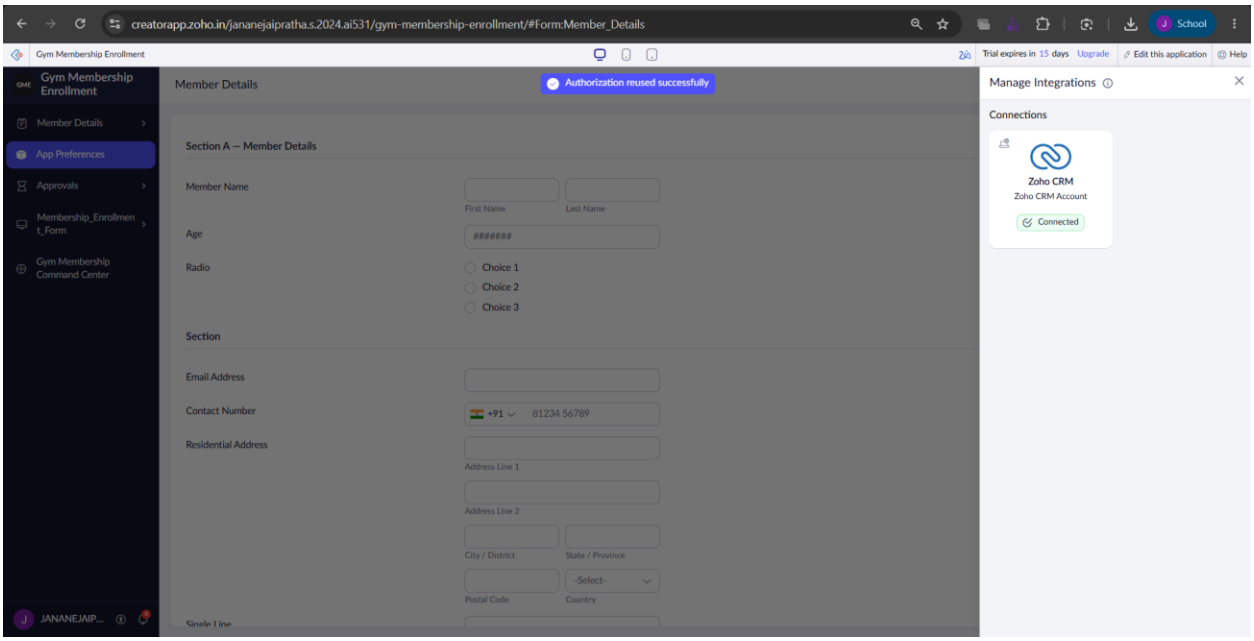

Configure a **Form Workflow** in Zoho Creator so that the script runs **On Success** of the `Member_Registration` form submission.

1. Navigate to **Workflows** > **Create Workflow** > **Form Workflow**.
2. Select the `Member_Registration` form and trigger on **Add -> On Success**.
3. Add a **Custom Function** and write the following Deluge script:

Testing and Validation

1. **Test Submission:** Open the live version of the **Gym Membership Application**, fill out the `Member_Registration` form with sample data (e.g., John Doe, john.doe@example.com, Premium plan), and submit.
2. **Verify Execution:**
    a. Check the **Script Execution Logs** in Zoho Creator to ensure the `invokeurl` returned a `200 OK` or success status code.
    b. Open **Zoho CRM** and navigate to the **Contacts** module to verify that a new contact has been automatically created with the correct details

Result:

The integration of the **Gym Membership Application** with **Zoho CRM** was successfully implemented using Zoho Creator **Connections** and **Deluge `invokeurl`**. This experiment demonstrates how seamless cloud-to-cloud service integration eliminates manual data entry, reduces errors, and keeps member records synchronized across platforms in real time.
