8.Configuring User Management and Role-Based Access Control (RBAC)

1. Aim

To configure user management, assign specific user roles, and implement Role-Based Access Control (RBAC) in the **Gym Membership Application** built using Zoho Creator to secure data access and restrict form/report permissions based on user personas (e.g., Administrator, Gym Trainer, Member).

2. Objective

- Understand how Zoho Creator manages user authentication and user invitation.
- Create and define custom **Roles** (Administrator, Trainer, Member) with distinct permission levels.
- Restrict access to specific **Forms**, **Reports**, and **Pages** based on assigned roles.
- Utilize record-level criteria filters to ensure users only view data relevant to them (e.g., members seeing only their own gym status).

3. Tools Required

- **Zoho Creator Account** with administrative privileges.
- **Gym Membership Application** containing:
  - Forms: `Member_Registration`, `Membership_Plans`, `Trainer_Assignment`.
  - Reports: `All_Members`, `All_Trainers`.

4. Procedure

Step 1: Defining Roles in Zoho Creator

Before assigning users, you must define the hierarchical roles within your application.

1. Open your **Gym Membership Application** in the Zoho Creator editor.
2. Navigate to the left-hand menu and click on **Users & Permissions** (or **Settings** > **Users & Permissions**).
3. Click on the **Roles** tab.
4. Create three distinct custom roles by clicking **Add Role**:
    a. **`Administrator`**: Full control over all forms, reports, settings, and user management.
    b. **`Gym Trainer`**: Can view member lists, assign workout schedules, but cannot modify pricing or delete member records.
    c. **`Member`**: End-user role; can register/view their own profile and membership status.

Step 2: Setting Component-Level Permissions (Form & Report Access)

Configure what each role can see and do within the application interface.

1. In the **Users & Permissions** section, go to the **Permissions** tab.
2. Select a role (e.g., **Gym Trainer**) from the dropdown.
3. Configure component access:
    a. **`Member_Registration` Form:** Set to **Read/Write** for Administrator and Gym Trainer; set to **Create Only** (or restricted view) for Members.
    b. `All_Members` Report:
        i. *Administrator*: **Full Access** (View, Add, Edit, Delete).

ii. *Gym Trainer*: **View & Edit** (Allowed to update training notes).
iii. *Member*: **Restricted** (Configure record-level filter so users see *only* records where `Email == zoho.loginuser`).

Step 3: Implementing Record-Level Criteria (Data Filtering)

To ensure data privacy so that standard members cannot view other members' private information:

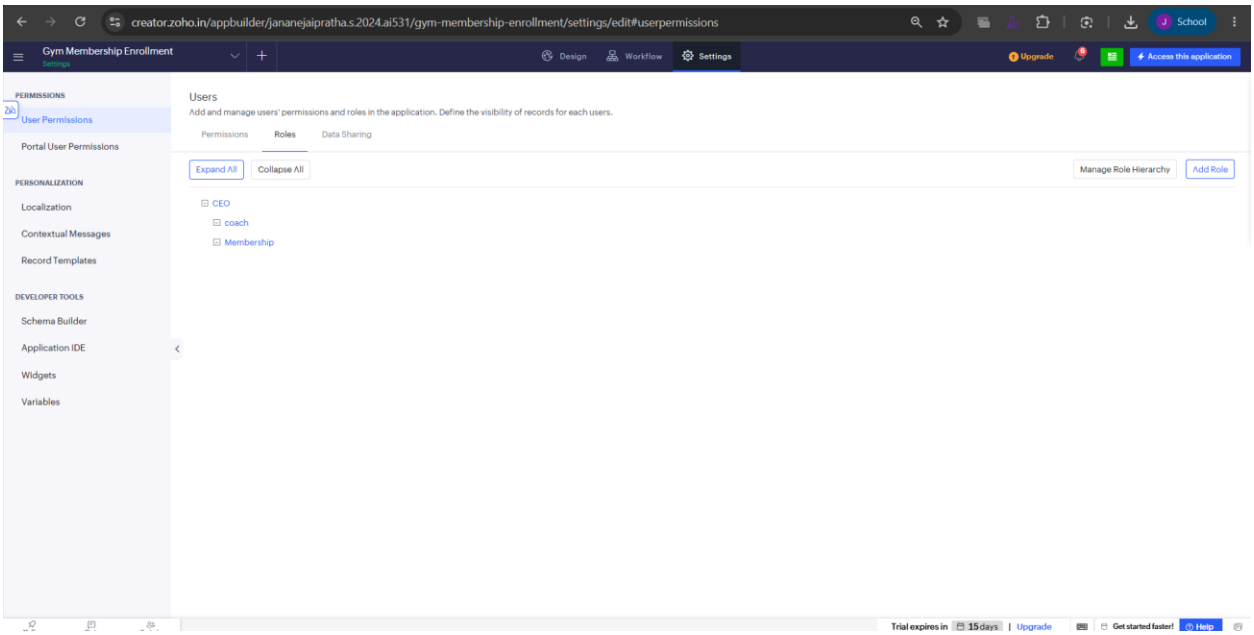

1. Click on the **`All_Members`** report in your application builder.
2. Go to **Report Properties** > **Criteria**.
3. Apply a dynamic criteria filter based on the logged-in user:
4. *Note:* Administrators and Trainers can have a separate report or an unfiltered view assigned via their respective role permissions.

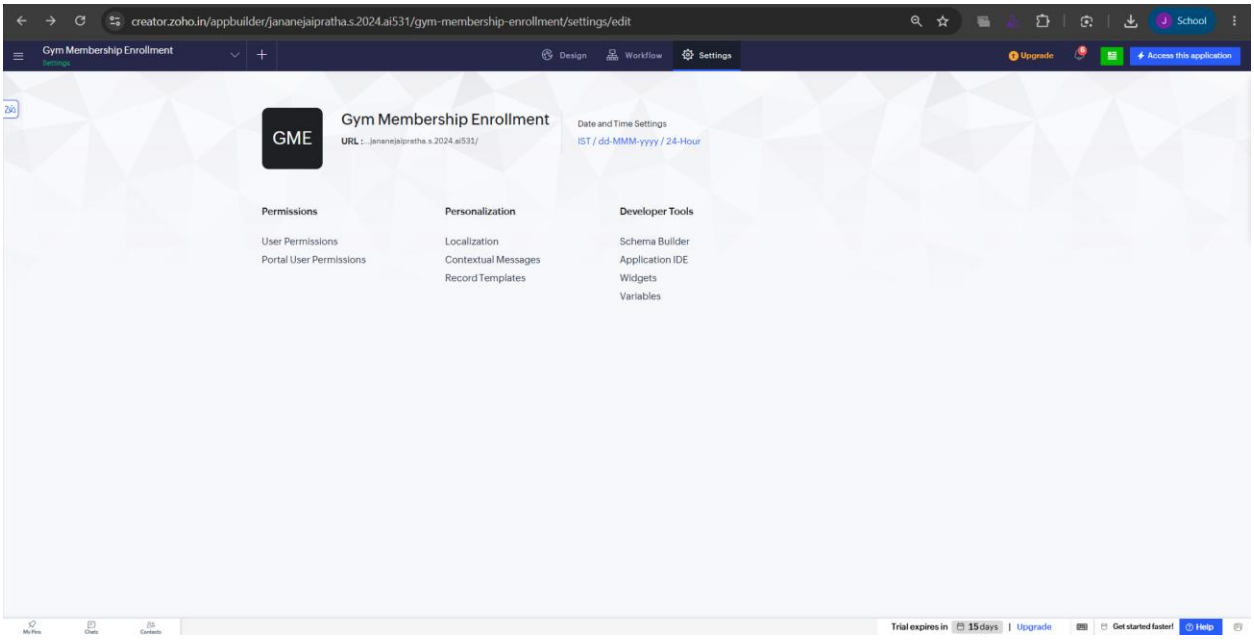

Step 4: Inviting Users and Assigning Roles

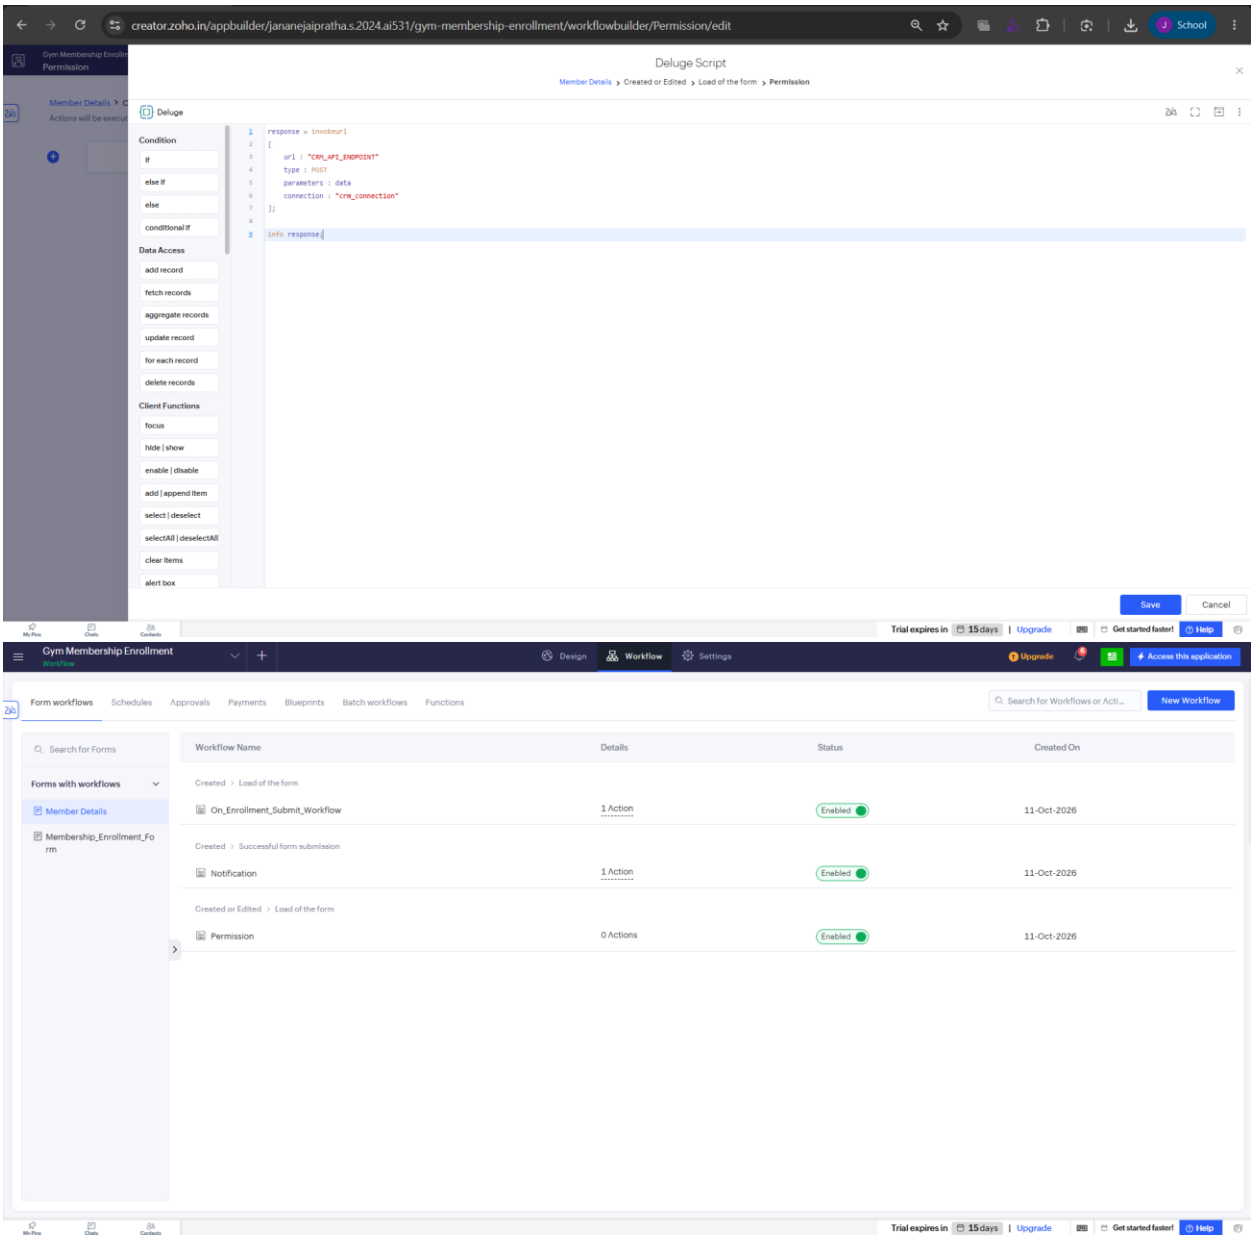

Once permissions and roles are established, invite users into the application ecosystem.

1. Navigate to **Users & Permissions** > **Users** tab.
2. Click **Invite User**.
3. Enter the email address of the user you want to add.
4. Select the appropriate **Role** from your created list (e.g., assign `Gym Trainer` to a trainer's email).
5. Click **Send Invitation**. The user will receive an email invitation to access the Gym Membership Application securely via their Zoho account.
